**Era Helicopters selects The eMan Solution™
eMan will centralize technical publications world-wide**

AviIT, Inc. the makers of The eMan Solution are pleased to announce that Era Helicopters, LLC. has selected The eMan Solution, the aviation industry's first centralized, technical publications management and delivery solution based on thin-client technology, to be implemented at all bases of operations world-wide,

The eMan Solution empowers all authorized users to gain instant access to all technical publications including, OEM applications, ERP programs, flight operations content, company maintenance documentation and virtually any other electronic application or file via the convenience of the secure eMan Solution portal.

"With Era's world-wide operations, we needed a cost-effective solution to centralize our technical libraries, and to improve our version and revision control process. After an in-depth evaluation of The eMan Solution, we determined there would be an immediate quality control benefit in addition to a significant cost savings by centralizing our technical publications. With eMan, we will virtually eliminate the need to distribute technical documentation via paper manuals and drastically reduce the labor and management associated maintaining multiple base revisions. With the implementation of eMan, all technical documentations company-wide will be revised centrally, and version control will be assured.

The implementation of eMan will result in a lower-cost, more efficient, more effective, and consequently, an overall safer maintenance operation by having all applicable content easily available from one single centralized access point".

Stewart Stavley, VP of Maintenance

eMan virtually eliminates the need for costly duplicate subscriptions and ensures complete revision management, audit capabilities, compliance tracking and version control. eMan also allows temporary access to 3rd. party vendors and other remote users. Vince Doherty, Vice-President of AviIT, Inc. added:

"We're proud to have been selected by Era Helicopters to implement The eMan Solution. We fully-understand the "mission-critical" nature of aircraft technical publications. Era Helicopters, once again, is showing its leadership in the industry by constantly looking for ways to improve the way technical publications are managed and made available to their users, regardless of their location. We look forward to working together with Era Helicopters and playing an ongoing role in their efforts to improve overall aircraft maintenance and safety".
